Rest assured that Oliver is taking care of your electrical needs. Oliver's Electricians will test, inspect and check the following to make sure that your electrical system is operating properly and safely.

## ELECTRICAL INSPECTION INCLUDES:

### TEST

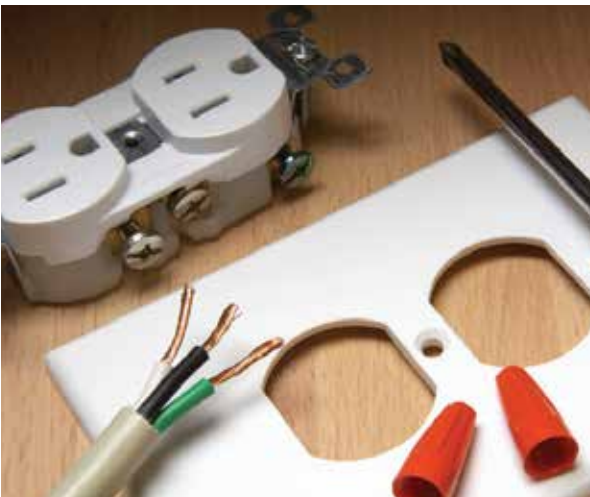

- Smoke detector and carbon monoxide detector operation and batteries
- Receptacles for reverse polarity and grounding
- Ground fault receptacles for proper operation and review locations
- Ground fault and arc fault breakers for proper operation

### INSPECT

- Service entrance cables
- Exterior service meter
- Exterior grounding connection
- Grounding and bonding points
- Proper mounting of equipment

### CHECK

- Grounding bridge interior and exterior
- Main breaker for correct sizing
- Trip settings for the installed breakers match the wire size
- For loose termination points
- Connection points are free of corrosion
- Correct voltage rating
- Check for dangerous knob and tube wiring (deemed **unsafe** by insurance companies)
