**HEATING • COOLING • PLUMBING • ELECTRICAL • HOME REMODELING**  
**POLAR BEAR JERSEY SHORE DIVISION**

Rest assured that Oliver will take care of your plumbing needs. Oliver's Plumbers will perform an inspection to make sure that your plumbing system is operating properly and safely.

## PLUMBING INSPECTION INCLUDES:

- Checking water pressure - high water pressure can stress piping and fixtures, resulting in potential leaks and shorter life.
- Dye testing all toilets - leaking toilets can waste hundreds of gallons of water per month.
- Inspect and test all faucets for proper operation.
- Inspect all exposed piping for leaks or corrosion.
- Inspect and test sink drains for proper drain flow.
- Inspect and test under sink piping - traps and supply valves can be replaced before a leak causes unwanted damage.
- Inspect washing machine hoses - which is a frequent cause of preventable water damage in homes.
- Inspect and test emergency shut off valves for proper operation - being able to turn off water in an emergency can minimize expensive water damage.
- All exposed main shut off valves in basement will be inspected and tagged.
- All outside faucets inspected for leaks and absence of vacuum breakers.
- Visual inspection of the water heater, including anode rod.
